

Call for papers

Globally, there has been an increasing concern over the impacts of climate change and pandemic factors on management of natural resources and policies targeted at it. This compounded by the changing global climate has added stress, thus resulting in further deterioration of our natural resources. The efforts laid by the concerned agencies so far has not been adequate in terms of minimizing the adverse impacts on our environment. Be it deforestation and forest degradation, food insecurity, alterations in watersheds and the downstream ecology, epidemics including COVID-19, deteriorating ecosystem services, declining biodiversity, wild life and their habitats among others, have in one way or the other witnessed some changes and exerted pressure on the environment.

Nepal is no exception to these changes and in fact, there have been limited attempts to analyse and understand the issues, its biophysical, policy related and institutional explanations and the ramifications to the society at large. As the country has already embarked into federalism, the roles that the different layers of government play are equally important in addressing them. However, with the new institutional setup, not only are there opportunities in the form of decentralized approach to managing natural resources and its governance, there are also confusions over the authorities that the different government levels hold. This offers critical questions to be explored. How have the questions pertinent to natural resources perceived, framed and understood by different actors?; Do the existing policies contribute to optimizing economic benefits through productive utilization of forest and natural resources?; How are the local actors responding to the current policy changes with the problem?; How have climate change and other environmental stresses impacted the management of forest and natural resources?; What are the gaps in knowledge that could better inform the public debate on the agenda of natural resources management? What are the lessons learned so far on collaboration and coordination between diverse stakeholders, such as, right holders-the forest users' groups, the government authorities, private sector service providers, scientific researchers and the policy makers at all three layers of governance? The current policy

debates on natural resources and the changing political scenario offers contributions to the knowledge base in order to answer these questions.

In this context, the Journal of Forest and Livelihood calls for papers that offers critical knowledge in field of natural resources in Nepal. As a scholarly attempt to document knowledge on diverse themes, we invite articles that contribute/address following one or multiple issues.

1. Community-based forest management in the changing context
2. Sustainable Forest Management: Challenges and opportunities
3. Sustainable agriculture, policy and institutions
4. Climate change, response measures, climate governance and financing
5. COVID-19 and its impact on agriculture, forest and biodiversity
6. Gender and social equity in natural resource governance
7. Biodiversity and protected area management
8. Federalism and forest governance
9. REDD +, carbon trade and PES
10. Role of civil society organizations for accountability effectiveness

Deadline for paper submission

The full manuscript should be submitted no later than 30 May, 2021. The authors will be informed about the acceptance of the paper via email.

Style

Please refer to the guideline for authors for the style of the paper and bibliography. The papers will be peer reviewed and will be published, subject to satisfactory revision of the reviewers' comments.

Submission

Please submit your manuscript at fa@forestaction.org with a cc to Mr. Rahul Karki at rahul.karki@gmail.com by 30 May, 2021

Guideline for Authors

The Journal of Forest and Livelihood aims to inform environmental policy process by facilitating dialogue among politicians, professionals, activists, researchers and policy makers. The Journal documents and disseminates the insights, lessons and innovations taking place in socio-cultural, political and economic aspects of environmental governance and rural livelihoods in Nepal. Original scientific papers, review articles and perspective papers are published in the journal. In this connection, we welcome articles analysing contemporary issues on nature-society interactions that have direct implications both on local livelihoods and resource sustainability. We particularly encourage the papers that are guided by critical social sciences perspectives and enriched by insights from deliberative governance, political economy, political ecology, social learning and institutional theories. The authors are fully responsible for the originality of the paper and formal correctness and should ensure that the paper is not published previously.

Type of contribution: Contributors may consider two options: a) long articles (up to 7000 words), or should not exceed 15 pages including tables, figures, references, and abstracts and b) perspective papers (around 2500 words), or should not exceed 8 pages. Specify the type of your contribution while submitting an article.

Abstract and key words: Abstract is a short summary of the whole paper. Authors are required to include an abstract not exceeding 150-200 words and 4-5 key words. It should describe all essential facts of a scientific paper. Keywords must be included and should not be the repeated words that are included in the title of the papers. Key words should be taken from the main body of the paper. The abstract is an important part of the paper and cited in world databases.

Structure of the paper: Articles should be divided into following sections, if appropriate: Introduction, Materials and methods, Results, Discussion, Acknowledgments, References, tables, and figure legends. Introduction should outline the main reasons why the research was conducted; describe a brief review of literature consisting of refereed periodicals, journals and books, and the goal of the authors. Materials and methods should provide the methods and procedures used in the research study. The results or the findings section should state the findings of the research/study based on the methods applied. The findings should be arranged in a logical sequence. The discussion should explain or evaluate the findings of the research/study and relate it with the wider literature on the subject and the research questions leading to a logical conclusion.

Language: Articles should be submitted in English (British), bear in mind that there should be uniformity in the language used.

Mode of submission: Articles should be submitted in electronic form (word format) in the e-mail address provided.

Formatting: Standard size of paper (A4 format), type size 12 font in Times New Roman, 2.5 cm margins on each edge of the page. The heading levels should be properly identified.

Author details: give full name, organizational affiliation and position, and email address. In the case of multiple authors, identify the corresponding author.

References: All publications cited in the text should be given in a reference list following the text. Authors are strongly advised to follow the standard scientific conventions of referencing and should be formatted in the following way:

In text citation

For single author: (Paudel 2010)

For double authors: (Paudel and Ojha 2011)

For multiple authors: (Paudel *et al.* 2010)

For multiple literatures: (Ojha 2007; Paudel 2010; Khatri *et al.* 2012)
